Welcome to AgentCon Rome

A one-day conference for developers building the future with AI agents. Talks, hands-on demos, and conversations on agent design, deployment, and integration.

Deep-Dive Talks

AI pioneers and industry leaders

Technical Workshops

Building, deploying, and scaling agents

Live Demos

Open-source frameworks and tools

Networking

A global community of builders

This isn't just another AI event — it's where developers meet to talk about real code.

Schedule · 15 May 2026

09:00 – 09:30	Registration
09:30 – 10:00	Opening Keynote
10:00 – 10:30	Coffee Break
10:30 – 13:00	Morning Sessions · Room 1 & Room 2
13:00 – 14:00	Lunch
14:00 – 15:40	Afternoon Sessions · Room 1 & Room 2
15:40 – 16:10	Coffee Break
16:10 – 17:00	Closing Sessions · Room 1 & Room 2
17:30	Selfie Lottery 🎉

Sessions · Room 1

ROOM 1

09 : 30	Empowering Developers with Next-Gen AI	Lee Stott · Keynote
10 : 45	Build and launch AI Agents fast with Microsoft Foundry Toolkit for VS Code	Carlotta Castelluccio
11 : 30	Costruire e orchestrare sistemi multi-agent con Microsoft Agent Framework	Alessandro Mengoli
12 : 15	Realizzare agenti per il mondo Microsoft 365: da Agent Builder a Agent 365	Lorenzo Barbieri
14 : 00	GitHub Agentic Workflows: Continuous AI per la manutenzione del software che non dorme mai	Giulio Sciarappa
14 : 45	Automatizzare la Compliance di Azure Firewall con gli SRE Agent	Martina Mangione · Elisa Anzelmo
16 : 00	Building Robust Agentic Retrieval Systems: From Tokens to Trustworthy Knowledge	Gianmario Spacagna
16 : 45	Agentic AI senza catene: entra nel Microsoft Agent Framework	Maurizio Moriconi

Sessions · Room 2

ROOM 2

10 : 30	Costruire e orchestrare sistemi multi-agent con Microsoft Agent Framework	<i>Alessandro Mengoli</i>
11 : 30	Automatizzare la Compliance di Azure Firewall con gli SRE Agent	<i>Martina Mangione · Elisa Anzelmo</i>
14 : 00	Agentic AI senza catene: entra nel Microsoft Agent Framework	<i>Maurizio Moriconi</i>
15 : 00	Coding a Multi-Agent Game Master with Strands Agents	<i>Tiffany Souterre</i>
16 : 10	Next-Gen AI Assistants: Open, Interoperable, Extensible with WayFlow	<i>Corrado De Bari</i>
16 : 40	ARC-AGI and the Road to General Intelligence: Levels, Benchmarks, and Approaches	<i>Lorenzo Satta Chiris</i>
17 : 00	Orchestrating AI Agents in Spec-Driven Development with Kiro IDE	<i>Haim Michael</i>

Our Speakers

16 engineers, researchers, and creators from across the AI agent ecosystem.

AI adoption is accelerating and AI agents are at the forefront

1.3B
AI agents

by 2028

82%

of organizations intend to
integrate them within 1–3 years

Capgemini 

90%

of enterprise software engineers will
utilize AI code assistants by 2028

Gartner

The new wave: multi-models and agentic AI

Challenges

- Select the best model in a fast-evolving landscape and continue using the best model throughout AI app and agent lifecycle
- Lack of streamlined tools for orchestrating AI agents
- Complex enterprise workflows with data spread across different sources
- Cost management and scalability of generative AI models
- Continuously monitor and optimize AI apps and agent performance

81%

of leaders expect agents to be integrated into their company's AI strategy in next 12-18 months

Source: Work Trend Index Annual Report

85%

of enterprises are pursuing multi-model strategies, emphasizing the need for rapid testing and deployment of new models to maintain a competitive edge

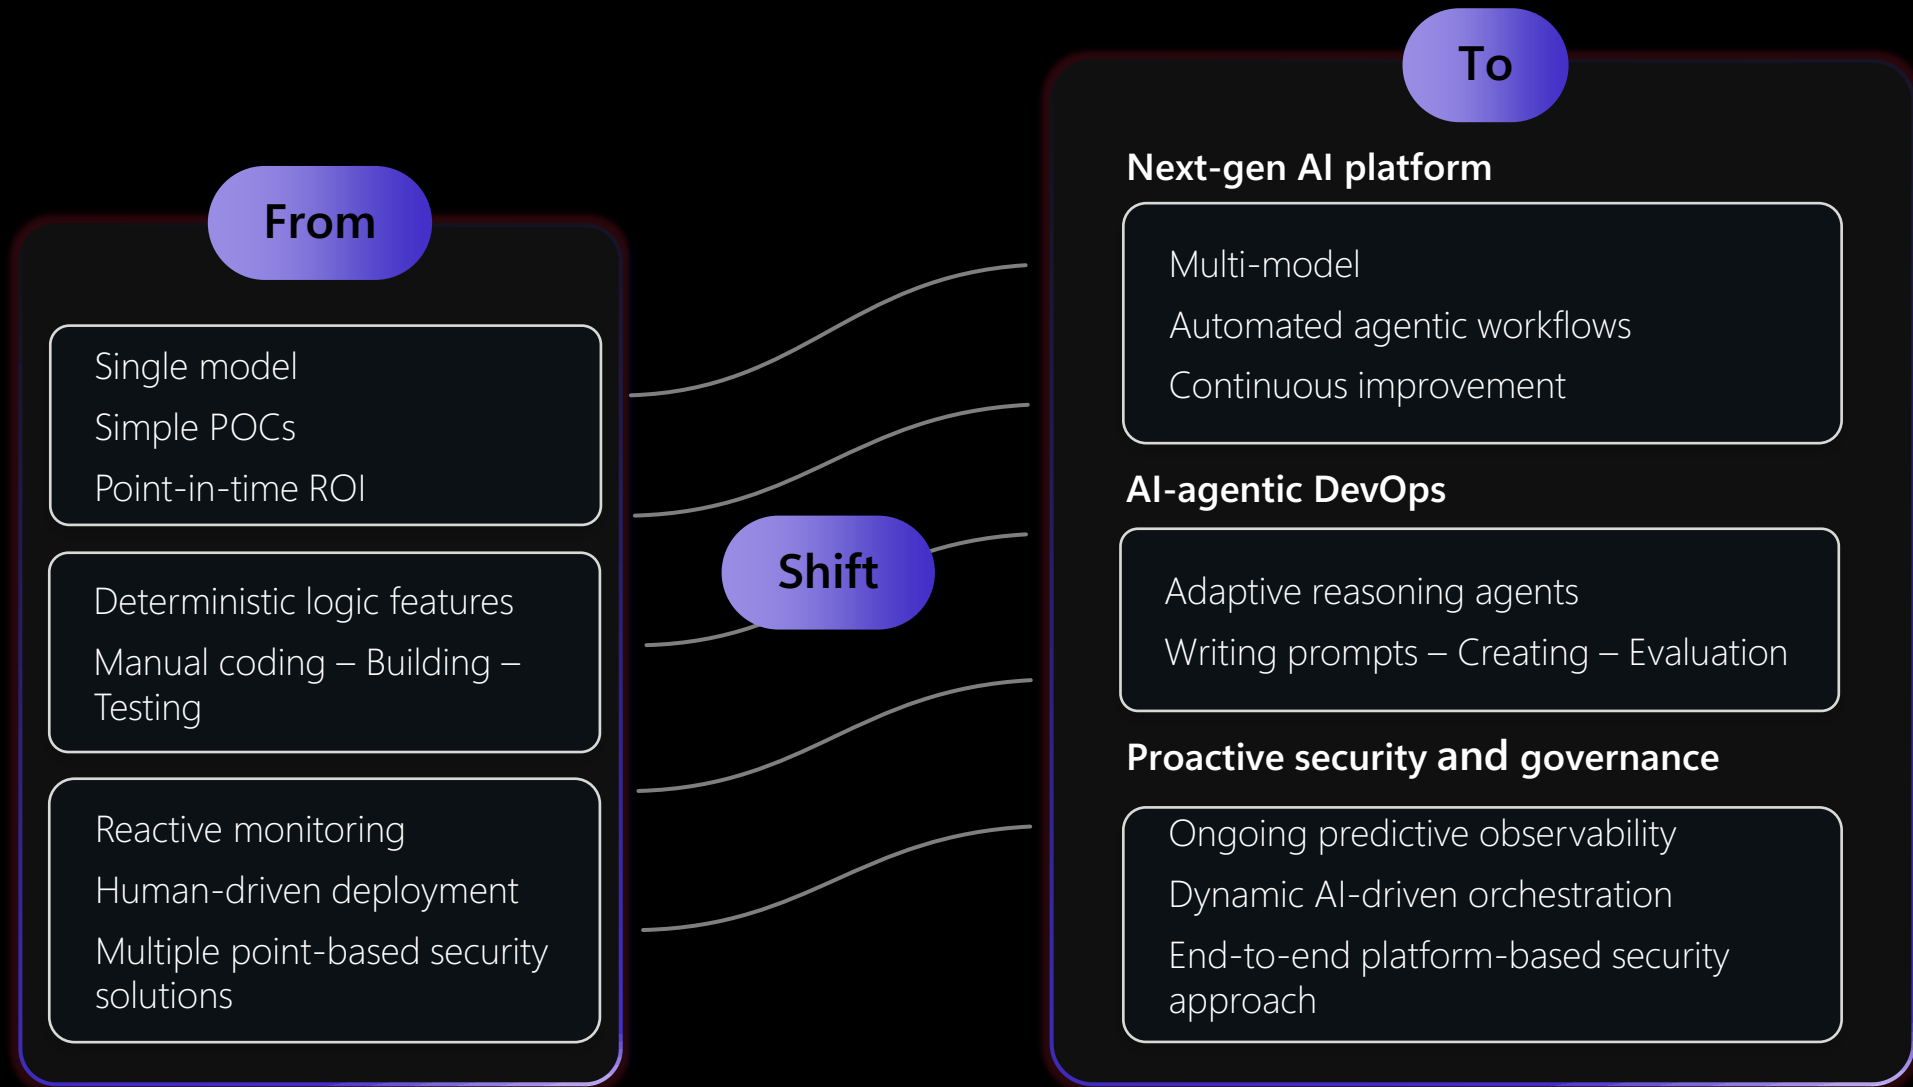

Source: Forrester

70%

or more generative AI experiments never make it to production

Source: Deloitte

The way we build AI apps and agents is changing

Process | People | Technology

Agent Development – Is Different

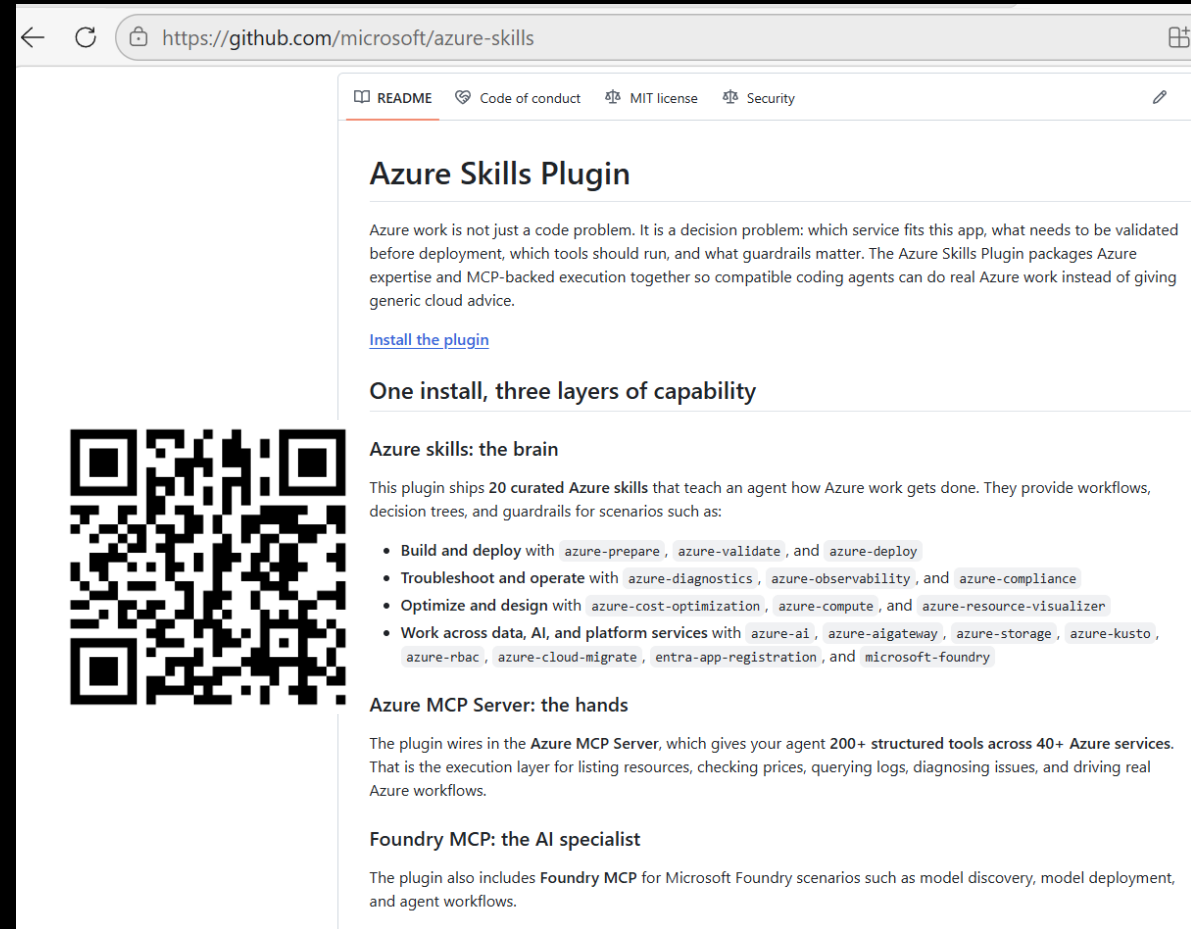

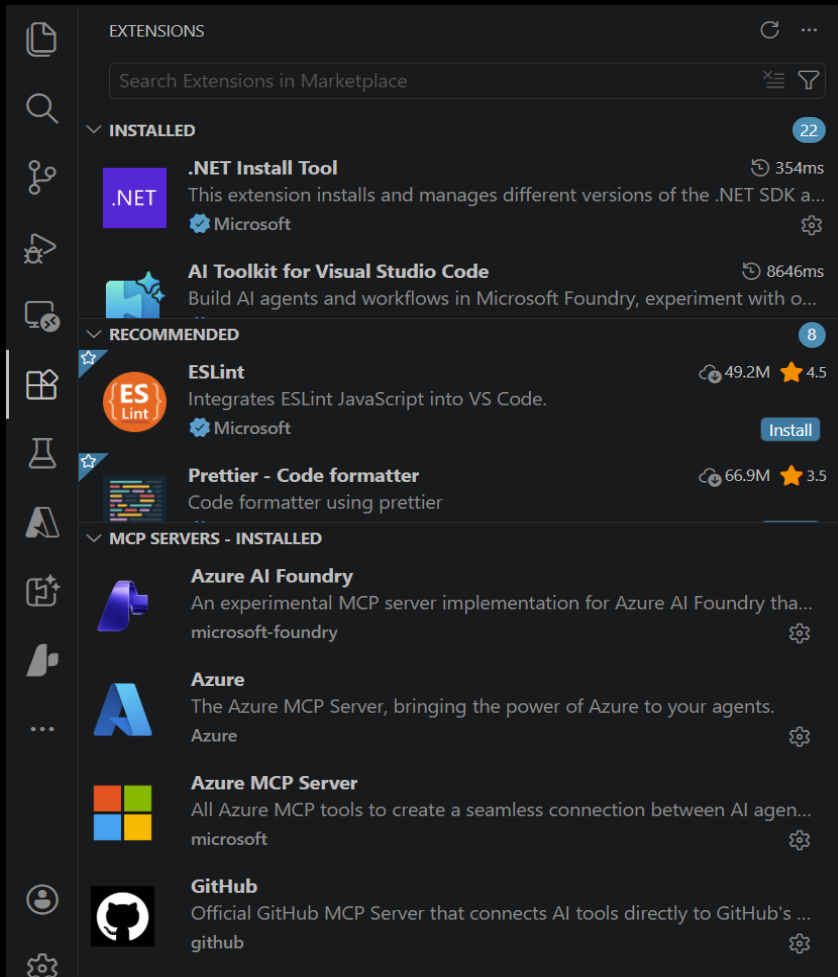

Traditional apps		AI agents
Fixed rules, manual updates	Logic	Autonomous, adaptive reasoning
Rigid, predefined steps	Workflow	Dynamic, iterative loops
Infrastructure-heavy, platform-specific code	Development focus	Intelligence, orchestration, adaptability
Coding & backend	Skills	Specification-driven, orchestration

Model Context Protocol

Bring in outside context with MCP servers

Teams will get better at DevOps with Agents

What's stopping you from...

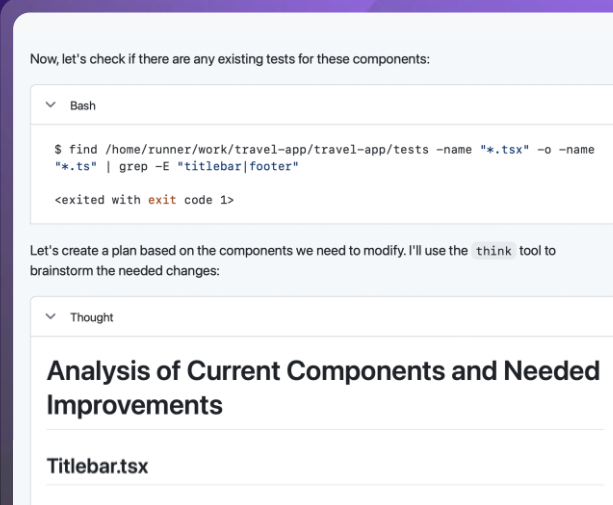

- ✓ Fixing bugs
- ✓ Implementing Incremental new features
- ✓ Performing dependency upgrades
- ✓ Targeted refactoring
- ✓ Implementing security fixes
- ✓ Doing a Code Review
- ✓ Improving test coverage
- ✓ Improving documentation
- ✓ Building IaC scripts

AI Agents – In Software Lifecycle

What's your use case for Agents?

DEMO SCENARIOS

Send NDA to 12 Partners

Bulk send with template selection, field mapping, policy checks & approval

Fix: Recipient Can't Sign

Diagnose identity/access issue, propose safe remediation actions

Track & Unblock Stuck Agreement

Status analysis, automated reminders, escalation path

Renewal & Amendment

CLM-style contract amendment with policy gate and audit trail

ARCHITECTURE

View Agent Architecture

See how the multi-agent system maps from the On-Call Copilot pattern

Closes [github/Identity-Teams#1805](#)

What approach did you choose and why?

Implemented a new GET endpoint for fetching organization suggestions when adding organizations in the org tab. This follows the same logic as the existing POST /organization_suggestions but with adjustments to fit the new workflow (Primarily, there is no selectedOrganizationIds parameter because we exclude eligible organizations using the already saved team.organizations).

Which environments does this change target?

- Production: dotcom
- Production: proxima
- Production: GHES

 Copilot coding agent

Description

The current header (`titlebar.tsx`) and footer (`footer.tsx`) components need improvements to er responsiveness on mobile devices. Based on review of the codebase, these components need adjustm spacing, and possibly different UI organization for smaller screens to enhance the mobile user experien

Why this is important

- Improves user experience across different device sizes
- Ensures consistent branding and navigation regardless of device
- Helps maintain professional appearance on all screen sizes
- Increases accessibility for users on mobile devices

Acceptance Criteria

- ☐ Review and update `/components/ui/titlebar.tsx` to use responsive design patterns:
 - ☐ Implement a mobile-friendly navigation menu (potentially a hamburger menu for small screen
 - ☐ Ensure proper spacing and alignment of navigation items on mobile
 - ☐ Test display of active page indicators on mobile view
- ☐ Review and update `/components/ui/footer.tsx` for better mobile experience:
 - ☐ Update footer columns layout to stack on mobile devices
 - ☐ Adjust padding and margins for better readability on small screens
 - ☐ Ensure all interactive elements meet touch target size requirements (min 44pxx44px)

Clear and
well-scoped issues

This is a Next.js-based travel application with TypeScript that helps users search for trip. The application uses React components, server components, and client components as these guidelines when contributing:

Code Standards

Required Before Each Commit

- Run `npm run lint` to ensure code follows project standards
- Make sure all components follow Next.js App Router patterns
- Client components should be marked with 'use client' when they use browser APIs
- Server components (default in Next.js App Router) should be used where possible
- When adding new functionality, make sure you update the README
- Make sure that the repository structure documentation is correct and accurate in th
- Ensure all tests pass by running `npm run test` in the terminal

TypeScript and React Patterns

- Use TypeScript interfaces/types for all props and data structures
- Follow React best practices (hooks, functional components)
- Use proper state management techniques
- Components should be modular and follow single-responsibility principle
